3/4 Measurement Project

Task: To plan and organise the MPPS School fete

Now you have hired everything you need for the school fete, your task is to draw a map of the fete so people know where to find everything. Make sure you include all the food trucks, entertainment and entertainers you have hired.

The fete will be held on the school oval. Open to a double page in your maths book, this will represent the oval.

Remember to include:
- space for your food trucks
- space for you rides and any other entertainment
- space for stage, ticket booth, toilet blocks etc.

After you have created your birds eye view, find the area and perimeter of each of your shapes.

Remember
Area is the inside of a shape (length x width)

Perimeter is the outside of the shapes (add all the sides together).

Remember: 1 square cm = 1 square metre
