

3/4 Measurement Project

Task: To plan and organise the MPPS School Fete

Congratulations! You just found an extra \$1 000 in the budget so you can hire a new ride!

But, there's a catch. You have to design the ride yourself.

Your ride must include the following:

- At least 2 different 2D shapes (square, triangle, rectangle, pentagon, hexagon, octagon, dodecagon,
- At least 2 different angles (right, acute, obtuse, reflex, straight)

Draw your ride from a side view. If you finish early and would like a challenge, you might like to try a bird's eye or front view.

Here are some pictures that might help you.

Good Luck!
